Math 348, Fall 2017
Midterm Exam 1
Oct 11 2017
Time Limit: 50 Minutes

Name:	

EID:	

This exam contains 2 pages and 4 questions. Total of points is 20.

You are allowed to bring a non-programable calculator and one piece of A4 paper for your reference.

Please show your ID upon submission of the test paper.

- 1. (6 points) Read each of the the following statements. Are they true or false statements?
  - 1. The relative error in approximation of p = 0.01 by  $p^* = 0.012$  is 0.002.
  - 2. Suppose a continuous function f is to be evaluated at  $x_0$  in the interval [0,1], but instead of the actual value  $f(x_0)$ , what we get is the approximate value  $f(x_0 + \delta)$  for some positive number  $\delta$ . Now assume that  $x_0 + \delta$  is also in the interval [0,1] and  $|f'(x)| \leq M$  for all  $x \in [0,1]$  and some M > 0, is it true that the error  $|f(x_0) f(x_0 + \delta)|$  is less than or equal  $M\delta$ ?

True. By mean value theorem,  $\exists \mathcal{G} \in (x_0, x_0 + \delta) \mid s.t. \mid f'(\xi) \mid = \int \frac{f(x_0 + \delta) - f(x_0)}{\delta} \mid \leq M$ 3. Is it true that  $\frac{2h^2 + h^3}{h} = O(h)$  considering h to be sufficiently small?

True.  $\lim_{h \to 0} \left| \frac{2h^2 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 + h^3}{h} \right| = \lim_{h \to 0} \left| \frac{2h^3 +$ 

2. (4 points) Let  $f(x) = (x+1)x(x-1)^2(x-2)$ . To which zero of f does the Bisection method converge when applied on the interval [-0.5, 1.5]? ([Hint: if you are not sure about your answer, write down the first few points that the Bisection method generates.])

$$f(x): \frac{-}{-} + \frac{-}{-}$$

3. (5 points) Considering the root-finding problem for the function  $f(x) = x^2 - 2$  using Newton's method. Does Newton's method converge if it starts with  $p_0 \in [1,2]$ ? If it does convergence, at which order it converges? Explain your reason.

Answer. Newton's method can be seen as fixed point iteration for 
$$F(x) := x - \frac{f(x)}{f'(x)} = x - \frac{x^2-2}{2x} = \frac{1}{2}x + \frac{1}{x}$$

So  $F'(x) = \frac{1}{2} - \frac{1}{x^2}$  and  $F''(x) = \frac{1}{x^3}$ 

Now we can verify

ond 
$$\mathbb{P}[(\sqrt{z})] = \sqrt{z}$$
 and  $\mathbb{P}'(x) = \frac{1}{z}$  for  $x \in [1, 2]$   $\mathbb{O}$ ,  $\mathbb{O}$ ,  $\mathbb{O}$  and  $\mathbb{O}$  and  $\mathbb{O}$  implies  $\mathbb{O}$   $\mathbb{F}$  maps  $[1, 2]$  into  $[1, 2]$  together. We conclude that the fixed-paint iteration  $\mathbb{P}[\mathbb{P}'(x)] = \frac{1}{z} - \frac{1}{z} = \mathbb{O}$ .

Converges quadratically

4. (5 points) A natural cubic spline S on [1,3] is defined by

$$S(x) = \begin{cases} S_1(x) = 1 + 3x^2 - x^3, & \text{if } 1 \le x < 2 \\ S_2(x) = 5 + b(x - 2) + c(x - 2)^2 + d(x - 2)^3, & \text{if } 2 \le x < 3. \end{cases}$$

Find b, c and d. [1,2] and [2,3]Answer b, c and d can be solved by definition of splines.

$$O \neq S_{1}(2) = S_{2}(2)$$

$$S'_{1}(2) = S'_{2}(2)$$

$$S''_{1}(2) = S''_{2}(2)$$

We must have  $S'_1(x) = 6x - 3x^2$ ,  $S'_2(x) = 6 + 2C(x-2) + 3d(x-2)^2$   $S'_1(x) = 6 - 6x$ ,  $S''_2(x) = 2C + 6d(x-2)$   $S''_3(x) = 5 - 6x$ ,  $S''_4(x) = 2C + 6d(x-2)$   $S''_4(x) = 6 - 6x$ ,  $S''_4(x) = 2C + 6d(x-2)$   $S''_4(x) = 6 - 6x$ ,  $S''_4(x) = 2C + 6d(x-2)$   $S''_4(x) = 6 - 6x$ ,  $S''_4(x) = 2C + 6d(x-2)$   $S''_4(x) = 6 - 6x$ ,  $S''_4(x) = 2C + 6d(x-2)$   $S''_4(x) = 6 - 6x$ ,  $S''_4(x) = 2C + 6d(x-2)$ 

3 implies 6-6x2=2c => (=-3)

@ use 
$$S_2'(3)=0$$
 we have  $2C+6d=0 \Rightarrow \overline{d}=-\frac{1}{2}C=\overline{1}$
